

I vasi tradizionali hanno un bordo interno, tecnicamente definito brida, dotato di fori o fessure lungo tutta la lunghezza del vaso da cui escono i flussi d'acqua per il risciacquo. La brida per sua natura è difficile da igienizzare e nel tempo diventa inevitabilmente il "riparo" per milioni di germi. RAK Ceramics ha così progettato RIMLESS, una soluzione tecnica che elimina definitivamente la brida sostituendola con un innovativo sistema di lavaggio che aumenta l'igiene del vaso e diminuisce il consumo d'acqua.

Il sistema RIMLESS non ha nessun bordo interno, nessuna brida, ma si basa su un design innovativo sapientemente studiato per ottimizzare il risciacquo. Attraverso due potenti getti posti nella sezione posteriore, l'acqua fluisce da destra e da sinistra scendendo verso il basso come una cascata su tutta la superficie del vaso eliminando qualsiasi residuo o deposito di sporcizia. I getti precisi e dosati uniti alla particolare conformazione del vaso consentono così una pulizia totale e sostenibile, eliminando la possibilità che il vaso sia ricettacolo di germi e batteri senza un eccessivo consumo di acqua.

Compact apre una nuova prospettiva nel progetto del bagno orientato sia all'ambiente domestico sia agli spazi pubblici: un nuovo bagno basato su **vaso e bidet filo muro** e sulla **riduzione delle dimensioni dei sanitari**.

I sanitari compatti consentono di ridurre al minimo lo spazio delle necessità, a tutto vantaggio della cura di sé.

Traditional WC pans have a system, technically known as a rim, with holes or slots all around the internal perimeter of the pan from which water emerges for flushing. By its very nature the rim is difficult to keep clean and with time inevitably becomes "home" to thousands of germs. So RAK Ceramics designed RIMLESS, a technical solution that definitively eliminates the rim, replacing it with an innovative flushing system which increases WC hygiene and reduces water consumption.

The RIMLESS system, as the name suggests, has no internal rim but is based on an innovative design for the optimisation of flushing. By means of two powerful water jets in the rear section, water flows from right and left, descending like a waterfall over the whole surface of the pan, eliminating all deposits or residues of dirt. The precise and regulated jets, together with the special conformation of the pan, mean total and sustainable cleaning, without excessive consumption of water and with no possibility that the pan should become a receptacle of germs and bacteria.

*Compact opens up a new perspective for the bathroom project designed for both domestic and public uses: a new bathroom based on **back to wall toilets and bidets in smaller sizes**. Compact sanitaryware makes it possible to reduce the space required to a minimum giving more space for care of the body.*

Compact

Compact Rimless

Compact Rimless vantaggi advantages

Un vaso sempre pulito e senza punti "nascosti" abbattere drasticamente la formazione di germi e batteri a garanzia di un'igiene ottimale. Per questo i sistemi RIMLESS sono consigliati in destinazioni d'uso ad alto rischio dove la pulizia è una priorità come strutture sanitarie, hotel e hospitality, luoghi professionali, bagni pubblici, ecc.

A WC pan that is always clean and without "concealed" points drastically reduces the formation of germs and bacteria, thus ensuring optimal hygiene. This is why RIMLESS systems are advised in high risk situations where cleanliness is a priority, such as hospitals, hotels and restaurants, professional premises, public toilets etc.

The RIMLESS water jets produce greater and more efficacious flushing power than traditional ones, removing more dirt faster, and with less water consumption.

The absence of a rim permits easy and immediate cleaning, since there are no more inaccessible points. Just a wipe with a cloth and the pan is hygienic and shining all over, outside and above all inside.

The simplicity of cleaning the RIMLESS system means less use of cleaning products as well as less water consumed at each flushing. In comparison with standard WC pans, RIMLESS uses up to 60% less water: towards a truly ecosustainable bathroom.
